

# The answer is already in your data.

Datasight is a data fusion and artificial intelligence company based in Paris. Its platform connects the data an organisation keeps in separate systems, from registries and ledgers to sensors and supply chains, repairs it and fuses it into one picture. It then puts what that picture says in front of the people who have to act, on the organisation's own servers. European ministries, major banks and insurers rely on it.

## ■ THE PLATFORM

### **Ocean Hub** THE DATA LAYER

One gate for every source, repairs it can explain, one identity for each person, asset and company.

### **Nora** INVESTIGATION

From a signal to a case that holds, every piece of evidence sealed the moment it is filed.

### **Mira** OPERATIONS

Machines, parts and suppliers read together, to catch the drift that comes before a breakdown.

### **Stella** NETWORK AND MAP

How people, companies, assets and routes really connect, on a graph or on a map.

### **Anna AI** OUR MODEL

Questions in plain words, answered from the organisation's own data, with their sources, on its own machines.

### **Vita** HEALTH

Hospital, pharmacy and insurance records together, with no patient exposed.

## ■ SECTORS

Government · Defence and security · Industry · Energy and utilities · Supply chain and logistics · Banking · Insurance · Telecommunications · Health

### DEPLOYMENT

## Your soil. Your servers. Your keys.

The platform is installed on the client's premises and can run offline. Anna AI runs on the client's own hardware, and no data leaves the client's walls.

### DIVISION

## Defence, robotics and autonomous drones.

A dedicated division, whose work we discuss in person.
